“The integration of information and communication technologies (ICT) in guidance and counselling has progressed”.

(Kettunen, J. & Vuorinen, R. 2019)

1. Future-proof Your Career – the project at a glance

Future-proof your Career aims to design, develop and implement a Future of Work Framework, focused on the identification -through a guidance process- of transversal skills which can be used to future-proof the careers of disadvantaged job seekers and enable sustainable future employment. This forward thinking career guidance framework will provide a way of working for guidance practitioners which facilitates quality future focused career plans for job seekers already marginalised in the labour market, so as to ensure their inclusion in a technological and digitalised world of work. It will support marginalised job seekers to understand and gain awareness of key competencies which are essential employability competences for a future labour market. These key competences underpin the ability to adapt and change to the demands of technology in the workplace, and are important in up-skilling in initial and continuous vocational, educational and training.

2. PARTNERSHIP MEETINGS

Covid-19 has brought many challenges to European partnerships such as FYC. Our capacity to meet physically for meetings, has been restricted and we have moved all of our communication online for the seeable future.

FYC partners have adapted well to this change, continuing to meet online and push ahead with the project outputs and developments. Our last partner meeting had high attendance and enabled the partnership to make key decisions regarding the structure of the FYC Platform and further explore soft skills and competency identification via the FYC tool.

WORKING FROM HOME

As individuals become aware of their own abilities, labour market possibilities open up.

3. DEVELOPMENTS TO DATE

- ✓ Completion of a comprehensive research report which identifies important technological changes in the world of work, and which impact disadvantaged job seekers.
- ✓ Completion of focus groups with Guidance Practitioners, Service users and Employers to support the identification of key skills and competencies as valued in a future world of work
- ✓ Development of the FYC Platform and a 'key competencies' framework which underpins the tool.
- ✓ Design and development of animation like graphics, and recording of voiceovers.
- ✓ Development of Future-proof-Your -Career website.

4. NEXT STEPS

- ✓ Development of a database managed reporting system
- ✓ Testing of the FYC tool with Guidance Practitioners, and Service Users
- ✓ Design and Development of Guidance Practitioner Training
- ✓ Next Partner Meeting - May 2021
